

Who is Becky Hinman?

Becky Hinman was born and grew up in Kansas. She earned her Bachelor of Science in Electrical Engineering from Kansas State University in 1986. She worked in Kansas and Texas as an Accountant. She started studying Tai Qi in 1993. In 1996, Becky moved to Santa Fe, New Mexico to attend Southwest Acupuncture College (SWAC). Becky earned her Master of Science in Oriental Medicine (MSOM) in 1999, after 3 years of accelerated study. SWAC has a tradition of 30+ years of teaching Oriental Medicine and is considered to be in the “Ivy League” of Oriental Medicine schools in the USA.

Her interest in Oriental Medicine derived from her love of Tai Qi and Qi Gong. Her first experience with acupuncture was life changing. An initial 15 acupuncture treatments with 8 weeks of Chinese Herbs and one dietary change cured her airborne seasonal allergies; dramatically improved her asthma (went from 26 triggers to 4 triggers) and cured her previously annual (15 consecutive years) pneumonia. Her asthma had gone untreated because she's allergic to all the asthma and allergy pharmaceutical medicines.

Becky is a naturally gifted teacher. She started tutoring children in mathematics at the age of 7. She continued this mathematics tutoring of all ages through High School. She was an adult literacy volunteer while in Texas and was preparing to teach Tai Qi when her mentor recommended she earn her degree in Oriental Medicine. While in graduate school, she tutored her classmates in Anatomy and Physiology as well as self-publishing 3 books in Oriental Medicine. Becky has taught numerous Acupressure classes to consumers and allied medical professionals (i.e. nurses, dental hygienists, etc.).

Becky's professional motto is “Educate and Heal”. She enjoys sharing her love and understanding of Oriental Medicine as well as explaining human biology and explaining Western Medicine to her patients and other consumers. She specializes in Internal Medicine, which includes the treatment of: digestive disorders; headaches; neck, shoulder, back, hip & knee pain; neuralgia & other nerve issues; sinus issues, bronchitis & asthma; smoking & coffee cessation; reproductive disorders; menstrual issues; and complex interwoven disorders.
